

# Baboon Research in Rooi Els

Joselyn Mormile B.S., C.V.T., M.Sc., Ph.D. Candidate

*University of Cape Town  
Department of Biological Sciences  
Human Wildlife Institute  
September 2016*

# Troop Members = 25 baboons

## One Adult Male:

Cliff

## Nine Adult Females:

Regina (Pregnant)

Maybelline (son: Mac)

Sage (daughter: Sassafras)

Vanelippe (son: Valentino)

Furiosa (son: Fiesty)

Cali (daughter: Flower)

Piper (son: Pilot)

Barbara

Nona

## Four Teenage Males:

Indy

Jack

Benji

Charlie

## One Teenage Female:

Amie

## Two Male Juveniles:

Jenga

Joey

## Two Female Juveniles:

Bebe

Rambles

# Research Overview

1. To determine the factors that affect the spatial decisions an unmanaged troop of baboons make in a simply developed human landscape.
2. To explore the attitudes and perceptions of the Rooi Els residents towards the baboon troop.
3. To understand how the coexistence between humans and baboons is maintained in Rooi Els and how it may be applied to other communities throughout South Africa.

September 2016

# Please Keep In Mind

1. To prevent causes biases in my research, I must remain neutral when I am collecting data on the baboons. This means I cannot prevent baboons from entering your homes or deter them from entering your property. Thank you for understanding.
2. That being said, please carry on deterring the baboons from entering your homes or properties as you normally would as this is also an important part of my study.

# How You Can Help

1. Any time a baboon or baboons gain access inside your home, please make a report in the book at the Rooi Els shop. These reports are very important for my research. They will help me create a map of the houses that the baboon(s) have been to during the course of my research here.
